

Delos is a global wellness leader that created the WELL Building Standard. The WELL Building Standard is a comprehensive framework for designing and operating buildings that promote human health and performance. Delos' headquarters in New York City is a showcase of how to apply the WELL principles to create a healthy and sustainable workplace.

Delos partnered with Gensler, a leading architectural firm, to design their headquarters in the Meatpacking District. The design team aimed to achieve the highest levels of building certification, including WELL Platinum, LEED Platinum, and Living Building Challenge Petal Certification. These certifications reflect the company's commitment to enhance indoor environmental quality, reduce environmental impact, and support social equity.

One of the key aspects of the WELL Building Standard is sound. Sound can affect our mood, productivity, and health. Excessive noise can cause stress, distraction, fatigue, and reduce the functionality and usability of the space.

To achieve this optimal sound level, Delos and Gensler chose SonaKrete in Arctic White for the ceilings of the open-plan office areas. SonaKrete is a spray-applied acoustic finish that absorbs excess noise and creates a comfortable acoustic environment. Unlike hard surfaces that reflect sound, SonaKrete absorbs excessive noise, reduces reverberation time, and improves speech intelligibility. SonaKrete in Arctic White also has a high light reflectance value, which helps to maximize natural daylighting and reduce energy consumption.

SonaKrete is not only good for acoustics and aesthetics but also for health and sustainability. SonaKrete is a Cradle to Cradle® Certified Bronze product, which means it meets rigorous standards for material health, material reutilization, renewable energy use, water stewardship, and social fairness. SonaKrete is also GREENGUARD Gold certified, which means it has low chemical emissions and supports healthy indoor air quality.

Project Details

Name: Delos World H.Q.

Location: New York, New York

Product Details

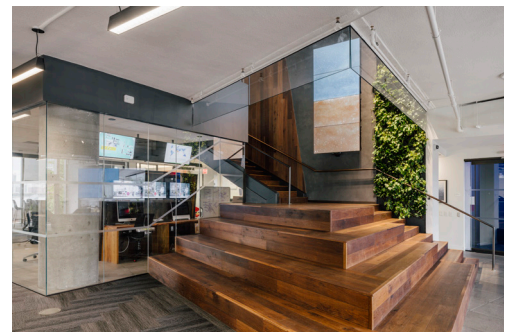

Product: SonaKrete

Color: Arctic White

Acoustical Consultant

Product: Gensler

Details: New York, New York

DEALERTRACK TECHNOLOGIES H.Q.

OAKLAND, CALIFORNIA

Located in New Hyde Park, NY, Dealertrack Technologies' new headquarters is an expansive, environmentally friendly, LEED - certified office building, encompassing over 230,000 square feet. The facility is home to nearly 600 team members with the capacity to grow. It includes numerous conference and meeting rooms, which can accommodate both small and large groups, a large cafeteria, open-plan workstations, and private offices. To address the need for acoustics, without compromising environmental or design objectives, SonaKrete in White was utilized for the ceilings throughout the space. Spray-applied directly to the gypsum substrates, the application of SonaKrete serves as an exposed finish that absorbs echo, reverberation, and excessive noise, which would otherwise be prevalent due to numerous hard surfaces and flooring.

Acoustic Performance

SonaKrete is applied in thicknesses from .25" up to .75" to provide the desired level of acoustical absorption. At .75", SonaKrete provides a NRC of .75.

Light Reflectance

SonaKrete White and Arctic White provide high light reflectivity, and can be used to maximize day lighting and reduce the need for excessive lighting fixtures.

Application

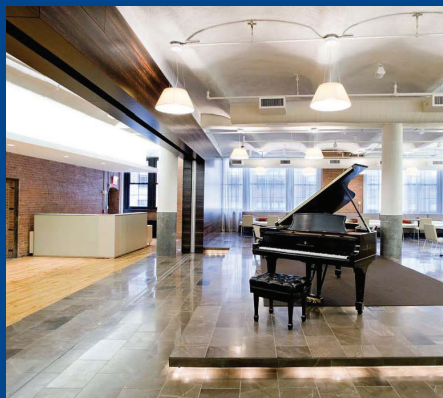

SonaKrete is engineered for application to common substrates and can adhere to complex or irregular surfaces.

Colorful Options

SonaKrete is available in standard colors, and can be manufactured in custom colors for unlimited design options.
