

Project Details

Name: Berryhill Baja Grill
Location: Houston, TX

Product Details

Product: K-13
Color: Black

Berryhill Baja Grill is a Texas-based restaurant chain featuring delectable Baja-style cuisine in a lively environment. To address the need for acoustical comfort at its newest location in Houston, Berryhill utilized K-13 Black on the exposed metal deck ceiling in the dining area.

Unlike hard surfaces and materials, which reflect sound, K-13 absorbs echo, reverberation, and excessive noise to ensure an ideal atmosphere for guests and staff. K-13 Black serves as an exposed interior finish that adds architectural interest without compromising ceiling height. Manufactured in Houston, Texas, K-13 was locally sourced, reducing the carbon footprint of the project.

K-13 is a high-performance, thermal and acoustical finish system. It is available in seven standard colors and in custom integral colors. No matter your design requirements or budget constraints, K-13 can be customized to meet your project needs. Parking garages, warehouses, restaurants, gymnasiums, sports facilities, and schools are just a few of the many projects that benefit from K-13. Whether for new construction or renovation, International Cellulose has an acoustical and thermal solution to help you create the ideal space.

Acoustic Performance

K-13 is applied in thicknesses from 1" up to 5" to provide the desired level of acoustical absorption. At 1", K-13 provides a NRC of .80.

Thermal Value

K-13 has a R-Value of 3.75 per inch. This demonstrates how K-13 helps keep a space at the right temperature, saving on costs and the environment.

Application

K-13 is spray-applied, between 1" and 5". It is engineered for application to common substrates and can adhere to complex or irregular surfaces.

Colorful Options

K-13 is available in standard colors, and can be manufactured in custom, integral colors for unlimited design options.

BYRON BURGERS

MANCHESTER, ENGLAND

K-13 in black was spray-applied to the soffit at the Byron Burger restaurant in Piccadilly Garden, Manchester to control reverberation and refurbish the old ceiling. With tiled floors and walls, noise levels during service would have been extreme. K-13 created a relaxed and comfortable socializing environment with great restaurant acoustics.

Research shows that customers are more likely to return again and again to acoustically treated restaurants and the staff are no longer subjected to dangerously high noise levels in the work place. Noise reduction in restaurants is a very worthwhile investment for your business.
