SonaKrete Custom Color was utilized for recent renovations to Oakland Airport's International Arrivals Building (IAB). This project drastically improved operational efficiencies-doubling the capacity of international arrivals, and effectively addressed the need for centralized office and support space for the US Customs & Border Protection (CBP) which operates from within the facility.

SonaKrete was utilized for the second level office areas, break room, and multipurpose training/conference room. Spray-applied to the original concrete ceiling-which features a distinct triangular configuration, and troweled to provide a seamless finish, SonaKrete maintains the original look while providing exceptional acoustical performance. In addition to acoustic performance, SonaKrete Custom Color provides an ideal light reflectance value, and helps to maximize natural day lighting.

No matter what your design requirements and budget constraints, ICC's products can be customized to meet your needs. Restaurants, libraries, offices, hotels, and worship centers are just a few of the many types of projects in which SonaKrete can be utilized to provide an attractive acoustical treatment. For new construction or renovation projects, ICC's family of products offer the ideal ceiling treatment for any thermal or acoustical insulation need.

Contact International Cellulose Corporation today at (800) 444-1252 or visit us online at [www.spray-on.com](http://www.spray-on.com) for complete details on how ICC can improve your building projects. ICC also offers architects an AIA/CES HSW Lunch-N-Learn program on the subject of Spray-Applied Acoustical Finishes.

### WHY CONSIDER ACOUSTICS?

There are so many things to consider when it comes to preserving, restoring, or re-purposing an existing space that acoustics can be easily overlooked. If acoustics are not considered, the functionality of the space may be compromised.

Although there are many different types of acoustical treatments available, few can deliver acoustic performance without jeopardizing the historic design objectives. The resilient fibers of SonaKrete absorb sound energy instead of reflecting it, reducing reverberation time and making speech and music more intelligible. SonaKrete reduces excessive noise while greatly improving ambient sound quality.

SonaKrete is available in two standard colors, and can also be produced in custom matched, integrated colors.

### CHICAGO ATHLETIC ASSOCIATION

CHICAGO, IL

Chicago Athletic Association opened in 1883 and served as a private men's club until 2007. Recently, the 122 year old Venetian Gothic building was restored, and converted into a high end Hotel. To ensure the expansive lobby would serve as a comfortable environment, acoustical treatment was essential. To address this need without altering the original ceiling, or ornate wood working, an application of SonaKrete, in a custom color, was utilized for the upper sections of the walls. The application helps to absorb echo, reverberation and excessive noise, while complimenting the distinct design and historic character.
