

Project Details

Name: Lunder Arts Center - Lesley University

Location: Cambridge, Massachusetts

Product Details

Product: SonaKrete White & Custom Color

Details: 55,000 Sq. Ft.

Architect Details

Product: Bruner/Cott

Details: Boston, Massachusetts

Lunder Arts Center is the home of Lesley University's College of Art and Design. The center consists of a new, modern facility, which connects to a historic church, that now serves as the library. The center was designed by Bruner/Cott, and is the first LEED Silver intended project on the campus. In order to address the need for acoustics, without compromising the design, or sustainability objectives, SonaKrete white and SonaKrete custom color were utilized for the center. SonaKrete is a class 1 class A rated material, which serves as an exposed finish, requiring no additional coatings or materials- reducing the need for excessive building materials.

SonaKrete absorbs echo, reverberation and excessive noise to make speech and music more intelligible. In addition to acoustic performance, SonaKrete white provides high light reflectance, to enhance natural day lighting, while the application of SonaKrete in a custom gray color, enhances the sleek design. SonaKrete is made in the USA from recycled, plant-based fibers, and is a UL GREENGUARD Gold certified material, which contributes towards healthy indoor air quality.
